

Are African countries meeting the health spending targets? Based on the [latest GSW spending data](#), this [scorecard](#) developed by GSW and the Africa Health Budget Network provides an at-a-glance view of 30 African countries' performance in reaching health spending targets.

The scorecard assesses performance on 4 indicators:

1. Is government health spending consistent with country wealth?
2. Is health spending prioritised in the government budget?
3. Does the government spend enough on each person's health?
4. Is government health spending transparent?

For each indicator, performance is scored against global targets but also according to whether progress was made between 2013 and 2014.

While a few countries register some positive progress, there is still a long way to go for most to meet the targets which would ensure that healthcare is free and universally provided. To find out more on how developing countries have progressed on MDG spending in health and other key sectors and why spending must be scaled up, read the latest in-depth GSW research "[Financing the Sustainable Development Goals: Lessons from Government Spending on the MDGs](#)"
