

Gail Hurley and Matthew Martin of DFI have contributed two chapters to a forthcoming book on Debt Sustainability Assessments and their Role in the International Financial Architecture, which have now been published as separate studies. Gail's study is on [How Transparency Makes Debt Sustainability Analysis a Trusted and Effective Tool](#), and looks at how to make DSA tools and analysis more transparent and accessible to stakeholders, and preparation of DSAs a more participatory exercise, especially in borrowing countries. Matthew's study is on [How to Ensure Debt Sustainability Accelerates Sustainable Development](#), and looks at how the DSA frameworks could be modified to incorporate the spending costs, financing needs and positive growth multipliers of spending on the social and environmental SDGs.
