

A mission staffed by a DFI consultant visited Cameroon to assist the government in beginning the migration of its database from CS-DRMS to the new Meridian debt management system. The mission trained Caisse Autonome d'Amortissement staff in how to validate their database and remove any errors from it before migration. Cameroon has an extremely large and complex database so this process is expected to take up to six months, after which another mission will go to Cameroon to complete the validation and migrate the database.
