

A mission by a DFI consultant visited Nigeria to assist the government in upgrading their CS-DRMS system from version 1.3 to version 2.3, in reconciling data between the two system versions to make sure version 2.3 could run smoothly, in configuring the system to fit their hardware and software needs, and in training Debt Management Office staff in how to use the new version of the system. The mission also migrated various Nigeria-specific customised debt strategy and transparency reports to the new version 2.3.
