

This project was funded by the African Development Bank, and due to a funding disbursement deadline was completed in 4 months. Its main objective was to install Meridian, migrate the debt database from CS-DRMS and ensure that staff of the Ministry of Finance and Development Planning can use the new system to manage Liberia's debt reporting needs. The project was underpinned by two skills transfer and capacity building workshops (each two weeks long) for 15 participants. Although the project was successfully completed, the short implementation period meant that the project recommended continued further capacity-building efforts in a second phase, including extending the database to cover domestic debt, reinforcing staff capacity of staff and strengthening MFDP IT infrastructure.
