

DFI, together with UNCTAD, conducted a technical assistance mission in debt management for the World Bank. Held in the capital Lomé, this capacity-building event aimed at identifying key strengths and weaknesses which characterise the country's debt structure. The mission found that Togo achieved considerable progress in terms of formulating debt management strategies and in debt sustainability analysis. However, significant weaknesses were identified at the front and back office level, which calls for strong support from the country's technical and financial partners.
